## THE CHECKLIST

Creating a successful beer program in a restaurant or bar begins in the walk-in coolers where beer is stored. In order to preserve the well-being to staff and the profitability of service, start by considering the following points in the Cooler Concepts Beer Cooler Safety 101 Checklist.

- Stop climbing on kegs or boxes to reach the beer controls
- Consider keg lifting equipment to improve employee safety
- Make sure floors and surfaces are clear from clutter
- Ensure employees know how to change out a keg of beer properly
- Train employees on the best safety practices inside of a walk-in cooler
- Map out your storage area, showing where particular types of kegs & cases will be stored to keep aisles clear
